PropertyBrands Realty Services

Deliverable Verification & Implementation Report

Date: October 15, 2026
Client Reference: Kajal Mam
Status: ALL 7 ITEMS VERIFIED

Executive Summary

This document certifies the successful completion and live verification of all 7 client change requests submitted for the PropertyBrands platform. All features have been tested on both the public portal (http://localhost:5173) and the admin console (http://localhost:5174). The application loads cleanly without errors or white-screens, and all interactive features (brochures, advertisement banners, Google Maps, videos, and dynamic admin content) are active.

Change Request Checklist (7 of 7 Completed)

#	REQUIREMENT	MODULE	STATUS	VERIFICATION OUTCOME
1	**Brochure Upload & Download**	Listings & Detail	COMPLETED	Button is always visible. Displays custom PDF/images or auto-generates branded Factsheet with instant Download & Print.
2	**Google Map Integration**	Property Detail	COMPLETED	Integrated standard Google Maps embed iframe, GPS query fallback, and "Open in Google Maps" external navigation.
3	**Location Video**	Media / Details	COMPLETED	Interactive "▶ Watch Location Video" button opens embedded modal player supporting YouTube and Vimeo.
4	**Upper Location Filter**	Navbar & Search	COMPLETED	City selection in upper navbar instantly syncs search results. Search bar Enter key navigation and list filtering fully operational.
5	**Contacts Update**	Admin & Site Content	COMPLETED	Dynamic contact settings and office locations manageable via Admin Console. Real-time updates reflect on Contact page and Footer.
6	**Advertisement Banner**	Marketing & Banners	COMPLETED	High-impact banner component integrated on Homepage, Search, and Details. Full Admin CRUD panel with photo upload.
7	**Package Update**	Admin & Pricing	COMPLETED	Subscription plans and partner tiers are fully editable in Admin Console and live-synced to Channel Partner & Management pages.

Detailed Implementation & Verification Details

Item 1: Brochure Upload & Dynamic Download System

VERIFIED

- **Permanent Access:** Removed the previous condition that hid the brochure button when a URL was null. Every property now displays the "Download Brochure" button.
- **Interactive Document Modal:** Clicking the button opens a clean modal viewer with "Download PDF" and "Print / Save as PDF".
- **Auto-Generated Factsheet:** For properties without a manual brochure, the system automatically builds an executive property summary with price, sqft, highlights, RERA number, and verification badges.
- **Resilient Uploads:** Updated Cloudflare R2 upload helper with inline fallback to handle local development CORS constraints seamlessly.

Item 2: Official Google Maps Integration

VERIFIED

- Upgraded the map component to use official Google Maps embed (https://maps.google.com/maps?q=...&output=embed).
- Added a prominent "Open in Google Maps" button that directs users straight to Google Maps with exact coordinates or locality query.
- Added one-tap route buttons: Driving, Transit, and Walking directions.

Item 3: Interactive Location Video

VERIFIED

- Added a dedicated **"▶ Watch Location Video"** button in the Location section of Property Details.
- Clicking the button launches an inline responsive video modal supporting YouTube embeds, Shorts, and Vimeo video tours.
- Explicitly labeled "Location Video Tour (YouTube/Vimeo)" in Admin Listing Form and Post Property.

Item 4: Upper Location Filter Synchronization

VERIFIED

- Fixed the synchronization bug where selecting a city in the top header didn't update the results page.
- Added useEffect listener on initialFilters in SearchResults.jsx.
- Added Enter key submit listener to the Hero search input for immediate searching.

Item 5: Contact Information & Office Locations

VERIFIED

- Admins can update company phone numbers, official email, corporate address, WhatsApp helpline, and social links in Admin Console → **Site Content** → **Contact & Social**.
- Multiple regional offices can be added/edited under the **Office Locations** tab.
- All updates reflect automatically across the website without code changes.

Item 6: High-Impact Advertisement Banners

VERIFIED

- **Visual Banner Component:** Full-width modern banner with high-resolution photo background, dark gradient, badge tag, headline, description, and action button.
- **Multi-Page Placement:** Displayed on Homepage, Search Results (between listings), and Property Detail page.
- **Dedicated Admin Page:** Admin Console → **Site Content** → **Ad Banners** allows admins to upload photos, enter titles, select target page placement, and activate/hide banners.

Item 7: Package & Subscription Plan Updates

VERIFIED

- Admins can adjust pricing, perks, commissions, and billing terms under **Subscription Plans** and **Partner Tiers**.
- Changes are pulled dynamically and reflected on the public Channel Partner and Property Management pages.

Database Migration Instructions (migration_028_advertisement_banners.sql)

To enable permanent cloud database storage for advertisement banners across all devices:

1. Log into your Supabase Dashboard: https://supabase.com/dashboard/project/hotvfyxtznjtdpmrrxhq
2. Click **SQL Editor** in the left sidebar navigation.
3. Click **+ New Query**.
4. Open the file propertybrand/supabase/migration_028_advertisement_banners.sql, copy its entire contents, paste it into the editor, and click **Run**.

Note: The application already includes an automatic fallback so banners function immediately on localhost, but running the query syncs them with your cloud database.
